Established in 2014 as a complete print solution provider **TRADEMAX** is committed to offer the best cost effective and quality refurbished **ROLLERS** for all your machine makes and types.

Our experience in sourcing the right materials, make us to procure the best raw materials, enabling us to present the best quality rollers for both sheet fed and web presses.

We use the premium rubber compounds to maintain the dimensional and hardness stability for rollers with very long life.

High chemical and ink resistance help to avoid filling up of microspores. Thus chances of glazing and bulging are eliminated.

Presence of the right plasticizers, keeps the quality requirement of rubber and apt squeeze pressure. This will enhance the efficiency of roller to roller ink transfer.

Proper ink grinding is made possible, by keeping the required hardness and keeping proper pressure between the rollers.

utmost focus is given for the surface area finish, to get an even distribution at all levels of ink key settings.

And the results are...

- Maximum Dimensional and hardness stability
- Best Tensile strength
- Resistance to oil and abrasion
- Lower heat generation
- Better resilience
- Maximum resistance to bulging and Glazing

READY TO PRINT **ROLLERS** FOR ALL MACHINES

We are extremely proud to offer our wide collection of ready to print rollers, carrying our promise of quality and purity as these are designed and manufactured as per the stipulated specifications for the required results.

**Heidelberg | KBA | Roland | Komori
